#WonderWalls

PRESENTING **#WonderWalls**

When we push the boundaries of what's possible, to create something that's awe-inspiring, walls become Wonder Walls.

What you see is vertical structures with stunning walls that run seamlessly, with the slabs covering them like their own skin.

What makes it possible is precision engineering - with the thinnest and the largest slabs in the world, that hold their weight and make their application on vertical surfaces possible, giving them their effortless elegance.

Sourced from Laminam SpA, Italy and distributed in India by Stonelam Laminam, these slabs can completely transform the look of your buildings and leave you in wonder.

With us, you get a potent mix of international expertise and local intelligence to cater to the evolving tastes of the modern Indian audience.

WHY WONDER WALLS?

Unique features

- **CUT TO FIT YOUR WALLS PERFECTLY**
Stonelam Laminam slabs are 3 metres in length, the height of an average Indian room, compared to 2.4 metres offered by other brands. This means a perfect fit, zero wastage or rough cuts.
- **THE HYDROTECT® ADVANTAGE****
Vertical surfaces treated with Hydrotect® technology react with UV rays and decompose any organic matter, neutralising nitrogen oxides with a cleaning effect. This enables them to reduce pollutants in the air.
- **SUPER SLIM SLABS FOR MORE SPACE**
With just 3mm thickness, our slabs protrude less, leaving you with more elbow room in spaces where it matters the most – like the walls around stairs and in washrooms.
- **EXTREMELY LIGHTWEIGHT**
Weighing just 8.2 kg/m² with 3mm thickness, Stonelam Laminam slabs are easy to handle and add less dead load to buildings. This has other advantages like lower application costs, time savings and lesser wastage.
- **HIGH BENDING STRENGTH**
Our super slim slabs have a bending strength of 50N/mm²*. This puts us ahead of our competitors' much heavier 6mm and 9mm slabs. Their unique physical-mechanical features allow them to withstand various stresses.
- **PERFECT RIGHT ANGLES**
Our slabs are cut at perfect 90-degree angles, removing the need for additional cutting when purchased by clients. This reduces unnecessary wastage and leads to lower costs and superior aesthetics.
- **THE FIBREMESH ADVANTAGE**
We are the first and only ones in the world to structurally reinforce our slabs with double-coated Fibremesh. This allows for superior bonding with the original structure and sturdier application.
- **25-YEAR COLOUR WARRANTY**
Our commitment to the protection and preservation of our slabs' properties makes us one of the few providers of a 25-year colour warranty on our products.
- **WEATHER-PROOF**
Our slabs can resist moisture, UV rays, high temperatures and frost. This enables them to retain their features and chromatic properties for long periods of time when compared to traditional solutions like natural stones, ACP and paints.

WHY WONDER WALLS?

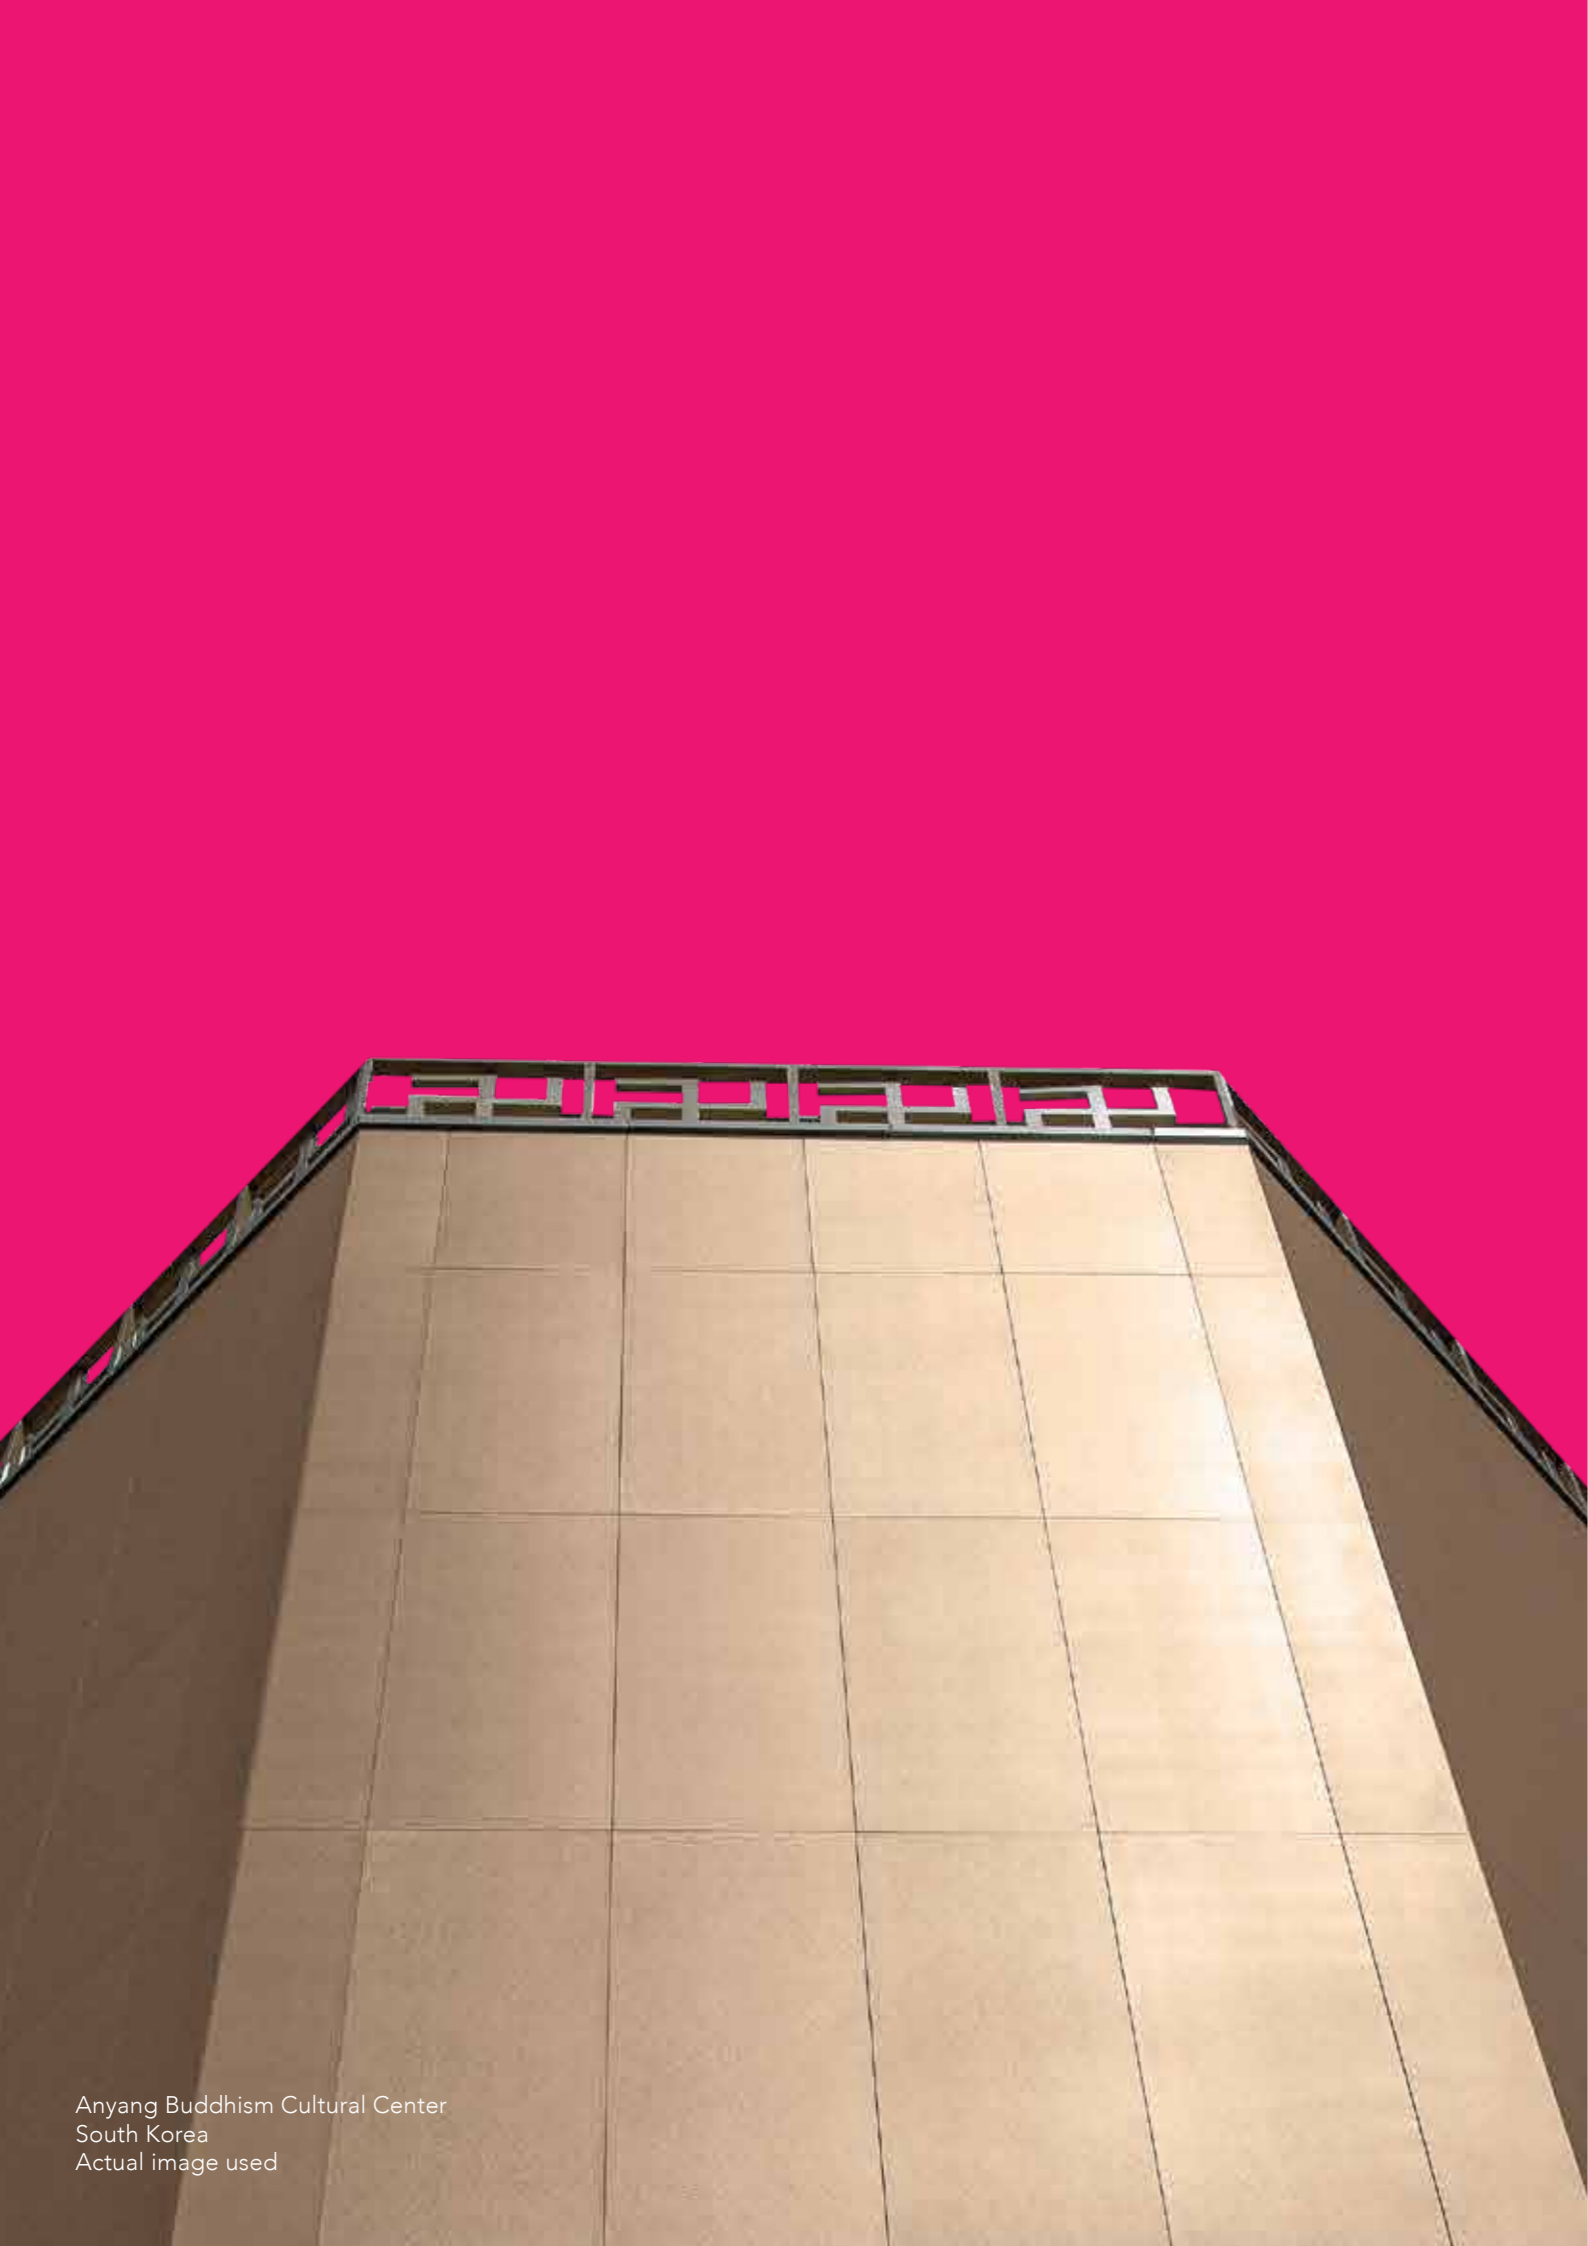

Technical features

- **UV RESISTANT**
With no organic pigments, our slabs' colours do not fade away when exposed to sunlight or other extreme weather conditions.
- **CHEMICAL RESISTANT**
Our slabs are resistant to most organic and inorganic solvents with hydrofluoric acid being the only exception.
- **FIRE RESISTANT**
No organic materials are used in the production of our slabs. When in contact with fire, it does not burn or emit smoke or toxic substances.
- **FROST RESISTANT**
With a water absorption level of 0.1%, our slabs are resistant to liquids and frost and can handle low temperatures with ease.
- **SCRATCH RESISTANT**
Its hard surface makes it resistant to scratches and abrasion. The properties remain unchanged even after intensive use and frequent cleaning.
- **GRAFFITI AND STAIN PROOF**
Stains of any kind and the strongest of paints can be easily removed from our slabs, making the colours last longer.
- **ECO-FRIENDLY**
Our slabs are made from natural raw materials and sustainable technology. They do not emit any harmful substances into the environment.
